- \$100 PER CROSSING FOR AGRICULTURAL USE
- \$1000 FOR INDUSTRIAL USE

TOTAL \$ _____

PLEASE MAKE CHECK(S) PAYABLE TO GOLDEN VALLEY COUNTY

**COUNTY HIGHWAY DEPARTMENT
CONSTRUCTION IN COUNTY RIGHT-OF-WAY PERMIT**

(Only complete this portion if you will be crossing or encroaching on a County Right-of-Way or section lines)

The Board of Golden Valley County Commissioners, in the state of North Dakota, hereby grant permission to

_____ to place, construct, and thereafter maintain a pipeline on a County road right-of-way at the following location(s):

SECTION	TOWNSHIP	RANGE	ALONG OR CROSSING COUNTY ROAD

*Attach additional sheets if necessary.

1. All pipelines must be set back at a minimum of 100 feet from all section lines and county rights-of-way unless perpendicular to said right-of-way or line or approved by the County Commissioners. All pipelines must be set back 200' from bodies of water or unoccupied buildings or approved by the County Commissioners.
2. The County shall have prior right of access and superior interests in the land to any pipeline easement holder in all County rights-of-way and over all section lines.
3. No pipeline is to be located closer than 500' from any building used as a dwelling or occupied by any individual or individuals. Any exception to this condition, the Board will require a signed waiver from each party having a dwelling or occupied building less than 500 feet from the pipeline. Said waivers must be submitted prior to issuance of a permit.
4. All valve releases or risers or safety valves, etc. must be set next to fence lines. If said riser, release, or safety valve interferes with proper grading, widening, or building of a road, said release, riser, or safety valve must be removed at the expense of the permit holder.
5. Appropriate warnings and protections shall be instituted and maintained by permit holder against accidental or intentional valve or release opening.
6. Any additional pipe or change of pipe size shall be prohibited unless this Board grants prior permission or permit.
7. If Forest Service lands are involved, all Forest Service specifications not inconsistent with any of the County specifications shall be followed regarding pipeline installation and maintenance.
8. The top 18" of the ditch must be wheel compacted and a mound left for settling. The applicant is responsible for weed control and revegetation on the disturbed land. Applicant will correct any settling or erosion of the ditch.

9. The necessity of pipeline conduits when crossing any road or highway is at the discretion of the Golden Valley County Commissioners. The Board of Commissioners shall set the requirements and specifications for conduit forth, and the party seeking the permit shall comply with such specifications as made by the Board.
10. Applicant shall bear the full cost for adjustment or relocation of any of their pipelines presently lying within the right-of-way of any county highway or lying within any future right-of-way or back slope areas acquired by the County at any time, upon request of County.
11. Applicant shall watch for any settlement of such fill across the road and/or loss of road surfacing caused by installation or maintenance of such pipeline and immediately repair the road surface. Applicant agrees to indemnify County against any loss or damage which shall be caused by Applicant's use of this easement as well as by the exercise of Applicants rights to ingress and egress or by any wrongful or negligent act or omission of Applicant, his agents, or employees.
12. The pipeline shall be placed under County roads by means of pipe or boring tool pushed under the surface of the road. The bore shall be cased and booted within the road template. If vented, the vent must be placed off the road right-of-way, or a minimum of 75' from the centerline of the road.
13. Above ground fixtures shall be located off the road right-of-way or on the right-of-way line.
14. All trenches and other excavations shall be carefully backfilled in such a manner as to eliminate settlement, and the surface of the ground shall be returned to its original condition.
15. Installation, maintenance, relocation, and removal of said pipelines on a County right-of-way shall be done in a manner satisfactory to, and subject to, supervision by the County engineer for the County Highway Department.
16. The Applicant shall hold the County harmless from any and all claims or damages to said Applicant's pipelines regardless of where such pipelines may be located, if the Applicant has been notified prior to any excavation work done by the County to allow the Applicant to identify the location of their pipelines.
17. Applicant and/or its successors shall repair or replace highway structures and appurtenances, and any existing pipelines located on, over or under highway right-of-way, which may be damaged as a result of the installation and maintenance of said pipelines on highway right-of-way, including but not limited to slumping in of trenches, collapse of pipe, etc.
18. Applicant reserves the public's right to use the above-described property and road thereon as it is both the County's and Applicant's intention that this easement shall in no way affect the road or section line under which this Applicant's pipeline shall be installed.
19. A GPS drawing of proposed location must be submitted and must show at a minimum the location of the proposed pipeline from a section or quarter line, and section, township, and range where the said pipeline will be placed.
20. Upon completion of construction, a survey must be filed with the Golden Valley County Recorder and must show at minimum the location of the pipeline from a section or quarter line, and the section, township, and range where said pipeline is located.
21. During construction or when encroaching upon a public roadway the applicant is required to provide proper signage such as "Road Work Ahead or Equipment Working".
